

Implementation

For Siemens NX, Teamcenter
and SAP-ECTR

CONSULTING
Since 1997

Welcome

Marenco AG

We offer you our implementation services for the installation and optimization of your Siemens NX installation.

- New and update installations
- Customizing
- MCT Tools

Organization

MARENCO AG offeriert Ihren Kunden ein breites Angebot an Kursen - von der Grundschulung bis zum Spezialkurs. Unsere Kurse werden als Standardkurse mit Teilnehmern aus verschiedenen Firmen oder als firmenspezifische Kurse durchgeführt.

- Within your company
- Via Remote-Access

We would be happy to create an individually tailored implementation concept for you based on our many years of practical experience.

Your Andreas Litscher
Head of Consulting

New and update installations for Siemens NX

Marengo AG offers as a service the installation of Siemens NX and software updates in cooperation with your IT department.

- New or update installation on test computer
- Update license server and license file
- IT support for software distribution
- Support during rollout

After the installation of Siemens NX or an update to a new version, we are also happy to support you in updating the customizing and user training.

The services are aimed at system managers and system administrators.

1 - 3 days, dates on request

Customizing for Siemens NX

When installing or updating Siemens NX, Marengo AG offers the creation or checking of company-specific adjustments to the standard system as a service.

Creation and adaptation of:

- Local or server-side Customizing
- Templates and drawing frames
- Roles / User interface
- User standards
- Drawing standards for drawings conforming to standards
- Company specific functions in the menu bar
- Reuse library
- Interface functions to PDM/PLM solution (Teamcenter and SAP-ECTR)

If your company has further needs for tools in Siemens NX, we can support you with our MCT tools.

The services are aimed at system managers and system administrators.

1 - 5 days, dates on request

MCT Tools for Siemens NX

Under the name MCT Tools, Marengo AG offers various tools which facilitate the daily work in Siemens NX. Annoying routine work should be reduced to a minimum. This means more valuable working time is available for project work.

These solutions are already in use by our customers for many years:

- **MCT weight calculation**

Weight calculation of individual parts and assemblies using density or weight specifications. Entry of the weight in a part attribute. For multi-body parts, selection is possible by using Reference Set.

- **MCT Drawing Frame**

Create and manage your company's own drawing frames. Attribute values or user input can be stored in the drawing frame.

- **MCT Part Data**

Customer-specific mask for entering part attributes

- **MCT Conversion Server**

Together with the SAP PLM UG Conversion tool from Pronovia AG, the MCT conversion server forms the necessary environment for the placement of drawing headers during release. In addition, neutral formats as well as part families can be generated based on characteristics.

- **MCT data exchange**

With MCT Dataexchange, Siemens NX data can be exported or imported in all common exchange formats. The conversion runs as a background job.

- **MCT Multiplot**

For a simplified output of drawings on plotters or the creation of graphic formats, the Multiplot tool is available. The considerable advantage is that the files are processed in the background and do not have to be opened individually in Siemens NX.

Do you have other challenges that you would like to solve with a company-specific tool or would you like to know more about one of our tools? Just ask us.

The services are aimed at system managers and system administrators.

1 - 5 days for installation and configuration, dates on request
