

FMEA & Risk Assessment Workshops

This service combines FMEA, risk assessment, and design review to identify technical risks and weaknesses at an early stage. At the same time, it supports CE compliance and adherence to applicable standards, contributing to safe and robust product development.

Contents

- Process & design FMEA
- Fundamentals of FMEA and risk assessment
- Systematic risk analysis
- Evaluation of technical risks
- Derivation of mitigation measures
- Documentation & traceability using structured tools and methods

Results

- Complete risk assessment / FMEA
- Documented mitigation measures

This workshop is particularly intended for:

- Product development teams
- Project managers
- Quality management professionals
- Design engineering & systems engineering teams
- CE compliance and regulatory affairs responsible personnel

1-2 individual workshop-days

Conducted using real customer projects and practical case studies
