

ISO GPS – Basic Training

This course provides a solid foundation in the ISO GPS (Geometrical Product Specifications) system and enables participants to confidently interpret and apply technical drawings in compliance with relevant standards. As a result, efficiency is improved throughout the entire product development process.

Contents

- Introduction to ISO GPS
- Dimensional tolerancing
- Datums
- Geometric Dimensioning and Tolerancing
- Modifiers
- General tolerances
- Practical examples

Results

- Confident use of technical drawings according to ISO GPS
- The Red Thread – A guide to creating technical drawings

This training is particularly intended for:

- Small and Medium-Sized Enterprises (SMEs)
- Suppliers
- Manufacturing companies
- Technical professionals
- Leaders and specialists in engineering, manufacturing, and quality

2 days standard training

2-4 days customer specific training / workshop
