

NX CAD for CAM Users

Designcenter NX

After the course, the participant is able to handle geometric models and assemblies and to create designs and auxiliary geometries for NC machining.

- Basics
- Sketching technique
- Modelling
- Assembly creation
- WAVE geometry linker
- Synchronous Technology
- Drawing derivation (short introduction)

The course serves as an introduction to the use of CAD functionality and as a minimum requirement for participation in NX-CAM training courses:

- Manufacturing Engineers
- CAM programmer
- AVOR Employees

3-5 days
